ASWIN PRASANNA

0757098911 / aswinprasanna246@gmail.com

SOFT SKILLS

- Analytical Thinking
- Problem Solving
- Teamwork & Collaboration
- Creative Thinking
- Data Analysis
- Time Management
- Continuous Learning

TOOLS

- Kali linux
- Ubuntu
- wireshark
- Nmap
- Burp Suite
- OWASP ZAP

TECHINICAL SKILLS

- Familiar with Access Controls
- Network Security Fundamentals
- Cybersecurity Fundamentals

LANGUAGES

- English
- Tamil
- Sinhala

PROFILE

Aswin Prasanna is an aspiring cybersecurity professional with a strong academic foundation from SLIIT. Skilled in configuring virtual environments (VirtualBox) and using tools such as Nmap, OWASP ZAP, Burp Suite, Wireshark, Nessus, and Qualys. Hands-on experience in cybersecurity monitoring, incident response, and vulnerability assessment with a focus on threat detection, log analysis, and security incident management. Proficient in programming (Python, C++, SQL) and web technologies (HTML, CSS, PHP, SQL), with additional expertise in UI/UX design using Figma and Photoshop. Holds the ISC2 Certified in Cybersecurity (CC) certification and other credentials. Actively participates in Capture The Flag (CTF) competitions and cybersecurity clubs, showcasing continuous learning, teamwork, and problem-solving skills.

EDUCATION

Bachelor of Science (Honors) in Information Technology - Specializing in Cyber Security
Sri Lanka Institute of Information Technology, Malabe (SLIIT) 2023 - 2027

GCE Ordinary level
St.sylvester's college kandy Dec 2019

GCE Advaced level -Maths
St.sylvester's college kandy 2020-Feb 2023

ACHIEVEMENTS & ACTIVITIES

- Capture The Flag (CTF) Competitions: Participated in 15+ CTF cybersecurity competitions – gained hands-on experience in areas like reverse engineering, digital forensics, and cryptography.
- Inter-University CTF Competition: Achieved 8th place out of 48 teams in the SLIIT Codefest Inter-University CTF Competition, demonstrating strong problem-solving and teamwork skills.
- Self-Learning, In Progress: Participated in Linux privilege escalation labs, TryHackMe, and PortSwigger Academy. investigating the fundamentals of reverse engineering and binary exploitation.
- Achieved 7th place in the Operation , demonstrating strong problem-solving and teamwork skills.

PROJECTS & LABS

TryHackMe – Secure Web Exploitation

- Developed interactive labs to demonstrate exploitation and defense of authentication bypass, CSRF, and IDOR vulnerabilities.
- Designed scenario-based challenges with increasing difficulty for applied learning.
- Implemented secure coding practices including session handling, least privilege enforcement, and token validation.

ISO/IEC 27001 Control Integration in Business Processes

- Researched and integrated ISO/IEC 27001 security controls into daily business operations of a mid-sized enterprise.
- Conducted Business Impact Analysis (BIA) and aligned risks with Annex A safeguards.
- Authored an internal compliance handbook to support certification readiness.

Bug Bounty & Web Security Testing

- Conducted manual and automated assessments of modern web applications using Burp Suite and OWASP ZAP.
- Verified findings with proof-of-concept exploits and applied CVSS scoring for risk evaluation.
- Produced executive-level reports with technical remediation guidance.
- Enhanced both technical vulnerability analysis and client-facing communication skills.

Network & Log Forensics Labs

- Investigated suspicious traffic patterns through NetFlow analysis and IDS alerts (Snort/Suricata).
- Correlated system/application logs to identify Indicators of Compromise (IOCs).
- Practiced full incident response workflows including evidence preservation, containment, and recovery.
- Strengthened skills in threat hunting and root cause analysis.

PortSwigger – Web Application Defense Exercises

- Explored business logic flaws, IDOR, and mass-assignment vulnerabilities in lab simulations.
- Performed exploitation followed by patch development and validation.
- Drafted SOC-style incident write-ups to translate exploits into actionable monitoring use cases.
- Advanced secure coding knowledge in validation, access control, and error handling.

Security Monitoring & Analysis labs

- Analyzed system logs and network traffic using Wireshark and tcpdump.
- Identified security incidents and anomalous patterns through log correlation.
